Overview

Thought Labs is the main software firm creating Thought Network. Established in 2018.

Vision

Thought AI was founded with the vision of how we interact with an intelligent connected world by making all digital information "smart." Our approach changes how we interact with digital systems for a more valuable and helpful customer experience.

Mission Statement

Since its inception, Thought AI has grown into a global organization of world-class developers, entrepreneurs, security experts, scientists, and industry leaders to build on this vision and bring transformative, intelligent, and connected technology to business.

Thought AI's innovations are supported by strong intellectual property creating self-aware software agents as the basis for our novel solutions. These innovations provide helpful services with little to no development, oversight, or maintenance. Present in over five countries, UK, Estonia, Nigeria, US, and India, we're helping launch real-world AI solutions worldwide.
