Mission Statement

Since its inception, Thought AI has grown into a global organization of world-class developers, entrepreneurs, security experts, scientists, and industry leaders to build on this vision and bring transformative, intelligent, and connected technology to business.

Thought AI's innovations are supported by strong intellectual property creating self-aware software agents as the basis for our novel solutions. These innovations provide helpful services with little to no development, oversight, or maintenance. Present in over five countries, UK, Estonia, Nigeria, US, and India, we're helping launch real-world AI solutions worldwide.
